

**TITLE OF INVENTION**  
**CONDUCTOR COMPOSITIONS FOR USE**  
**IN ELECTRONIC CIRCUITS**

- A conductive composition consisting essentially of (a) 50-95 wt %
- 5 finely divided particles of an electrically-conductive material dispersed in  
(b) a liquid vehicle, for use in the manufacture of an electrically-conductive  
pattern on a substrate for the use of reducing cross-sectional area and  
width while retaining conductivity and resistivity.
